Submitted Code: 8 minutes ago

Language: python3

Edit Code

```python
class Solution:
    def reverseString(self, s: List[str]) -> None:
        """
        Do not return anything, modify s in-place instead.
        """
        i = 0     # Pointers for indices
        j = len(s) - 1

        while i < j:
            # Swap char to mirrored index
            s[i], s[j] = s[j], s[i]

            i += 1     # Increment
            j -= 1

        # return None
```
