Submitted Code: 7 minutes ago

Language: python3

Edit Code

```python
1  class Solution:
2      def arrangeCoins(self, n: int) -> int:
3          full_rows = 0
4          row_len = 1
5
6          while n >= row_len:
7              n -= row_len
8              row_len += 1
9
10             if n >= 0:
11                 full_rows += 1
12
13         return full_rows
14
```
